THIS PROTEIN HAS NO OBVIOUS DNA-BINDING DOMAINS. IT MIGHT NOT INTERACT DIRECTLY WITH DNA BUT WITH DNA-BOUND PROTEINS.

1- SUBCELLULAR LOCATION: NUCLEAR.

1- SIMILARITY: TO YEAST GALL AND CCR4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               InterPro; IPRO01440; TPR. -1- CATALYTIC ACTIVITY: ATP + A PROTEIN - ADP + A PHOSPHOPROTEIN.
-1- SUBUNIT: IN DICTYOSTELIUM THE HOLDSKYME IS A DIMER COMPOSED OF
A REGULATORY (R) AND A CATALYTIC (C) SUBUNIT. IN THE PRESENCE OF
CAMP IT DISSOCIATES INTO THE ACTIVE C SUBUNIT AND AN R MONOMER.
-1- DEVELOPMENTAL STAGE: CAPK ACTIVITY IS LOW IN VEGETARIVELY GROWING
ANGEBAE, INCREASES DURING DEVELOPMENT OF AGGREGATION AND REACHES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
